Where to buy Lenakast?

Today, modern pharmacology uses in its practice a generic drug from India - Lenakast in order to fight multiple myeloma in combination with dexamethasone. Lenacast is an analogue of the drug Revlimid, which was produced by Celgene International. They both contain the same active ingredient called lenalidomide. If you think that you should order this medicinal substance for your therapy, then this can be done on the website of our Pharmacy. True, you cannot self-medicate, therefore, first of all, seek advice from a competent doctor in this area.

Generic LENA KAST prices

The active ingredient in LENA KAST is lenalidomide. The same active ingredient is found in the original drug. Accordingly, both drugs are equally effective. The only difference between them is that generics are always much cheaper. Therefore, buying LENA KAST on the website of our online pharmacy is the best choice. Democratic and affordable prices will pleasantly surprise you. We can assure you that every drug in our catalog is certified and has all the necessary licenses. Besides, they are available to all categories of the population.

Active substance Lenalidomide

All drugs based on lenalidomide are used by modern doctors to treat patients with multiple myeloma in combination with dexamethasone. After a short period of time, the number of cells that fight the disease begins to increase in the patient's body. During treatment, the patients showed side effects, such as constipation, indigestion, diarrhea, significant fatigue after certain exertion, convulsions, allergic skin reactions, anemia.

Description LENAFAST

30 capsules are packed in a cardboard box with the original logo of the company. Each of the capsules contains an active substance - lenalidomide.

Indications

A physician specializing in this field can prescribe Lenacast in case a patient is diagnosed with multiple myeloma. The dosage and period of administration should also be discussed with your doctor.

Contraindications

Lenacast is categorically contraindicated in minor patients (under 18 years of age); planning pregnancy or pregnant women; breastfeeding women; people with hypersensitivity to certain components of the drug; elderly people with hepatic impairment.
