Where to buy Rivofonet (Tenofovir 300 mg)?

Rivofonet (Tenofovir 300 mg) is an Indian generic. It has proven to be effective in treating people with HIV by targeting their infected cells. The drug is very effective when combined with other antiviral drugs. And with repeated therapy, experts say, a good result is always obtained. You can buy Rivofonet (Tenofovir 300 mg) in our online pharmacy, after consulting your doctor.

Prices for the drug Rivofonet (Tenofovir 300 mg)

Rivofonet (Tenofovir 300 mg) is a generic version of the original Tenofovir drug. Accordingly, it costs much less than the original. Its active ingredient is Tenofovir. Similar Indian generics are produced in well-known pharmacological industries, using modern and innovative equipment. Rivofonet is the same in its composition as the original Tenofovir, which means that it acts on the patient's body in an absolutely anthological way. By ordering this drug in our online pharmacy, you will be able to save money, because our prices are available to everyone.

Original drug Tenofovir

Tenofovir is the original generic drug called Rivofonet (Tenofovir 300 mg). Like all analogues, this antiviral drug is used in the complex treatment of HIV in adult patients and in the course of therapy to combat the hepatitis B virus. The drug is prescribed for a long period. The active ingredient is Tenofovir. There were practically no adverse reactions during the application, only occasionally patients noted nausea and fatigue.

Description of Rivofonet

It is produced in the form of film-coated tablets. 30 tablets are in a plastic jar. In each of the tablets, the active ingredient is Tenofovir (300 mg), and some auxiliary components are also present.

Indications

Prescribed by the attending physician during HIV therapy. It is used one tablet per day. If the patient has kidney problems, the dose must be prescribed exclusively by a doctor with experience in treating patients with HIV.

Contraindications Rivofonet

Contraindicated in children under the age of majority. It is also undesirable for women who are carrying a fetus and breastfeeding.
