Where to buy Tafshur?

The antiretroviral drug Tafshur is produced by the Indian pharmaceutical company Apraser. Earlier, American manufacturers developed a drug with the same composition and named it Vemlidi. These medicines are created for the treatment of adult patients who have chronic hepatitis B. Buy the drug Tafshur by ordering it from our portal. Entrusting your treatment to us will be the best solution, because we can guarantee that all the medicines that are in the site's catalog have passed the necessary certification and have all licenses. Before taking the medication, consult your doctors to confirm the possibility of treatment with Tafshur.

Prices for the drug Tafsure

Tafsure is formulated on a very unique basis - tenofovir alafenamide. Tenofovir, to which alafenamide was added, reduces the dosage of the drug by a significant number of times. It remains effective, and eliminates all the negative effects on the kidneys of patients, as is the case with pure tenofovir. It will be much easier for you to take Tafsure than any other similar medicine, which has been proven in practice. In addition, everyone who is very expensive to buy the original drug buys Tafsure, because its price is much lower. Order your medicine today.

Active ingredient tenofovir alafenamide

The drug Tafshur is developed on the active substance tenofovir alafenamide. Such an active substance acts much more easily on the renal system of patients than tenofovir in its pure form. Due to the addition of alafenamide, too strong side reactions will not appear, as it happens with other substances. The negative impact on tissue density will decrease. The active substance is used for the complex therapy of the human immunodeficiency virus. Tenofovir alafenamide can cause side effects such as: weakness in the body; muscle pain; chills; tachycardia; diarrhea; nausea; vomit.

Description

The drug Tafshur is sold in a cardboard box, 30 tablets in one pack. Each tablet is formulated with 25 mg tenofovir alafenamide.

Indications Tenofovir Alafenamide

The drug Tafshur can be prescribed to patients in order to undergo therapy against the hepatitis B virus. Only adult patients or children who are 12 years old can be treated.

Contraindications

The drug Tafshur is not taken together with the substances darunavir, atazanavir and dolutegravir. In addition, there are contraindications for those who have hypersensitivity to the components that are in the composition. Reception by pregnant and breastfeeding women should be discussed with the attending physician.
