Description

Basic informationDescriptionOrder, delivery and payment

The drug "Kaletra" has a combined composition used to treat HIV-infected patients. The drug consists of two active ingredients: lopinavir and ritonavir, which are both types of HIV protease inhibitors. Due to the effective blocking of the multiplication of the virus, lopinavir and ritonavir provide a decrease in the viral load on the human body, and the disease manifests itself much less: a stable remission occurs.

The international English-language name of the drug has not yet been developed. It is customary to use the Latin name of the medicine - Kaletra.

Buy the drug "Kaletra" (active ingredients - lopinavir, ritonavir)

You can buy the drug "Kaletra" by contacting the online store of the pharmacy. Here you can easily find all the necessary information about the medicine, including its price.

Kaletra price
